

For Teachers

# DreamBox Learning<sup>®</sup> Math<sup>x</sup> Home Use

Monitoring Student Usage and Supporting their Learning

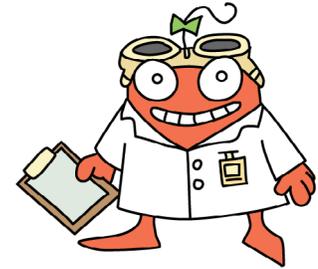

## Accessing DreamBox from home

Both students and educators log into DreamBox using the same URL:

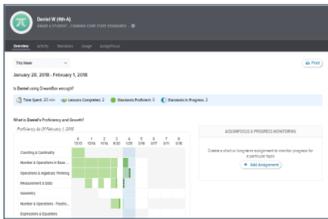

<https://play.dreambox.com>

If your school logs in using an SSO portal, please use that.

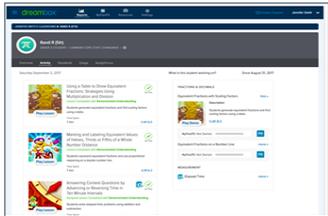

## Reports to Monitor Student Progress

While your students are away from the classroom, keeping up with a minimum of 5 lessons per week in DreamBox will help them continue their learning progress in math. The following are three reports that will help you monitor students while they are working on DreamBox at home.

### Overview Report

This report provides information and data usage, progress and proficiency for all students in a classroom. The report can be customized for different date ranges to view particular time frames. The List View displays key usage and growth metrics for each student in a class, and the Grade View displays student proficiency across grade levels within a class.

### Activity Report

This report shows you on what lessons your students are working and what they have completed. In addition, you can also see what strategies your students are applying when working on these lessons. This both helps you see where your students are in their learning pathways and gain insight on how to best support their learning progress.

### Standards Report

DreamBox now aligns to all state standards as well as Common Core. The standards report provides you an understanding into what your students have mastered, are in the process of learning, and have not yet started. It provides an easy way to track progress in comprehension and knowledge.

## Resources and Support Information

The Resources tab in the Insight Dashboard contains useful resources such as helpful videos, classroom content, student motivators, and more. To access it, just log into the dashboard and click on “Resources” in the main navigation.
